

**IGU Thickness**

All INTUS Windows come standard with highly efficient and hermetically sealed insulated glass. All IGU's come filled with Argon gas to provide additional thermal performance. They are also available in dual pane or triple pane configurations to meet the needs of your project.

**Glass Types**

Whether you have requirements for certain safety glazing (like tempered glass), are looking for a higher sound performance, or due to the location of your project, you require thicker glazing, INTUS Windows have a variety of solutions. With capabilities to include a range of glass pane thicknesses, many options can be utilized for your project.

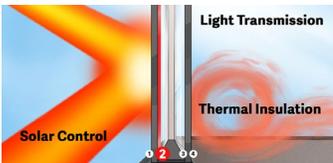

**Laminate Types**

Many projects require higher levels of sound performance due to their location or proximity to external environments. This can be achieved through the utilization of one or multiple laminate interlayers. With a variety of options, INTUS products can achieve high STC and OITC levels, providing superior levels of sound abatement, allowing for a peaceful and quiet interior environment.

**Decorative Glass**

If your project has a condition where you want to maintain the 'glass' appearance while preventing the interior from being seen, INTUS has a solution. Enamel glass is a type of glass produced by applying a ceramic paint onto its surface, which is then subjected to drying and tempering processes. It is offered in many popular standard RAL colors. Enameled glass is a stylish range of color-backed decorative toughened glass, that has a sleek, modern luster thanks to a high-quality coating on the back.

**Low-E Coating**

Different regions and areas have varying climate-based performance needs. INTUS Windows can provide a variety of Low-E coatings from Guardian Glass to achieve your project's requirements. Whether you need to meet a minimum u-value, SHGC or you're going for a Passive House certification, INTUS has a glazing package that can help you get there.

**Extras**

Sometimes projects have special requirements or conditions. Whether these include insulated panels or American Bird Conservancy-approved bird-friendly glass, INTUS has solutions for your project. Please consult your INTUS rep for additional options.
